

The collagen cycle accelerator

# HAbooster

**INCI name**

Hydrolyzed sodium hyaluronate

## Characteristics

- Super low molecular weight hyaluronic acid (Around 2,000)
- The promotion of collagen cycle
- Penetration into the upper epidermis
- Increasing skin moisture / Improving skin roughness

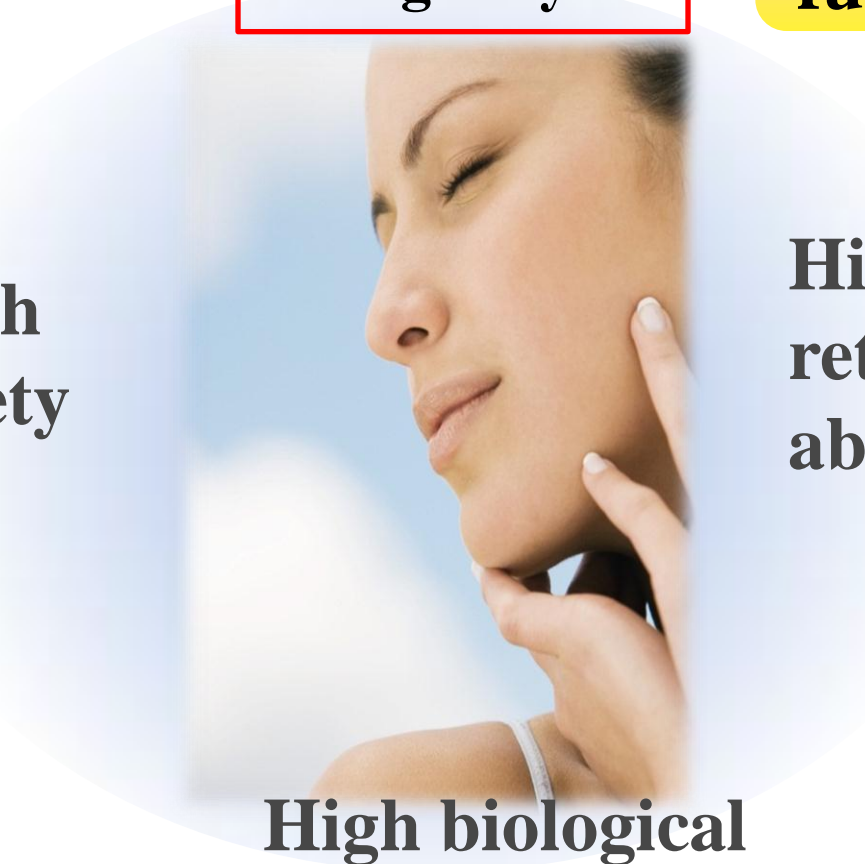

**Effects on the collagen cycle**

**New function!**

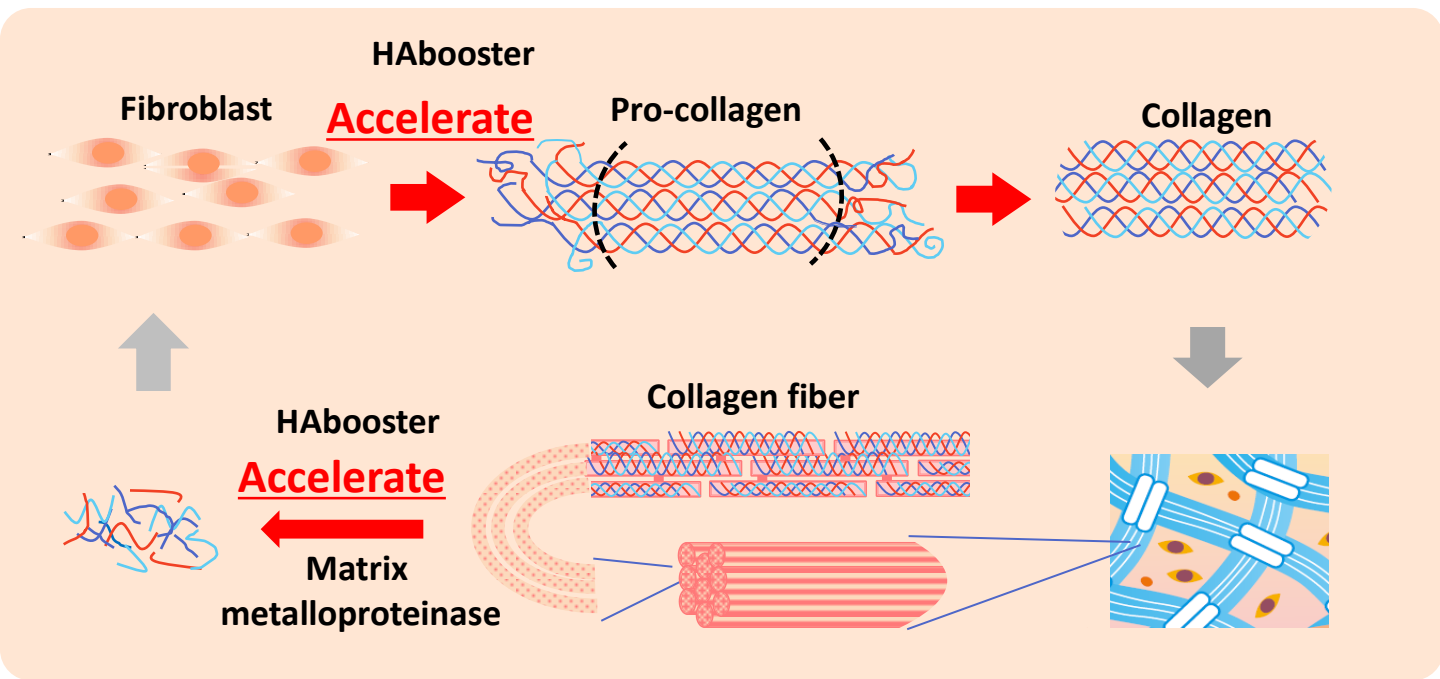

**High safety**

**High water retention ability**

**High biological compatibility**

# Mechanism of HAbooster in collagen cycle

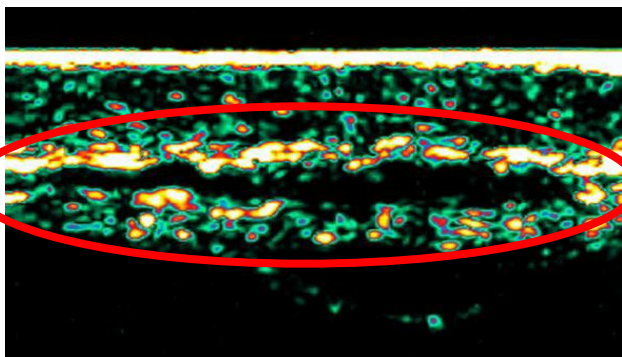

## Collagen synthesis test (in-vivo)

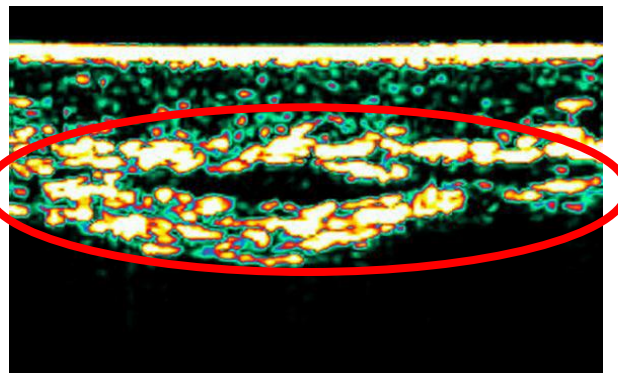

Measurement part: The forearm

Test concentration: 0.1%

Test measurement device: DermaLab

HAbooster 0.1% 0week

HAbooster 0.1% 4week

HAbooster activates & enhances the collagen cycle
